

R66T™ mobile apps

R66T Mobile Apps are designed to synchronize with our Wi-Fi networks in order to take advantage of our localized services, proprietary search engine and amazing speed.

As the consuming public increasingly chooses to connect via smart mobile devices, it's only natural that we provide them with options to enhance their mobile media experience both inside and outside our Wi-Fi Networks.

In Network.

R66T Mobile Apps running within our Wi-Fi zones may have one or more of the following features:

- Property zone identification that allows search results, deals and information to be specific to a location within 2 feet (for example, at a casino pool, near the bar, at the theater)

In Network cont.

- Aggregation of content designed for the actual location (digital magazines, images, deals and tickets etc)
- Powerful search engine that prioritizes results based on venue type and geo-location, thus offering results that are directly relevant to the user at the time
- Access to local and personal SkyLocker files within our intuitive Wi-Fi Dashboard

Off Network.

- R66T Mobile apps running off network will carry redeemable deals and coupons to the point of sale via a “virtual wallet”
- With Augmented Reality tools, it’s possible to identify R66T Hotspots by simply looking through your mobile camera
- Our custom Wi-Fi tools help you to identify and auto-connect to preferred hotspots with instant login and SkyLocker synching
- Our mobile social tools allow users to stay connected with each other off network and on network

Look for our upcoming new apps on mobiles stores and within our Wi-Fi hotspots via our SkyLocker app stores.
