

enterprise network topology

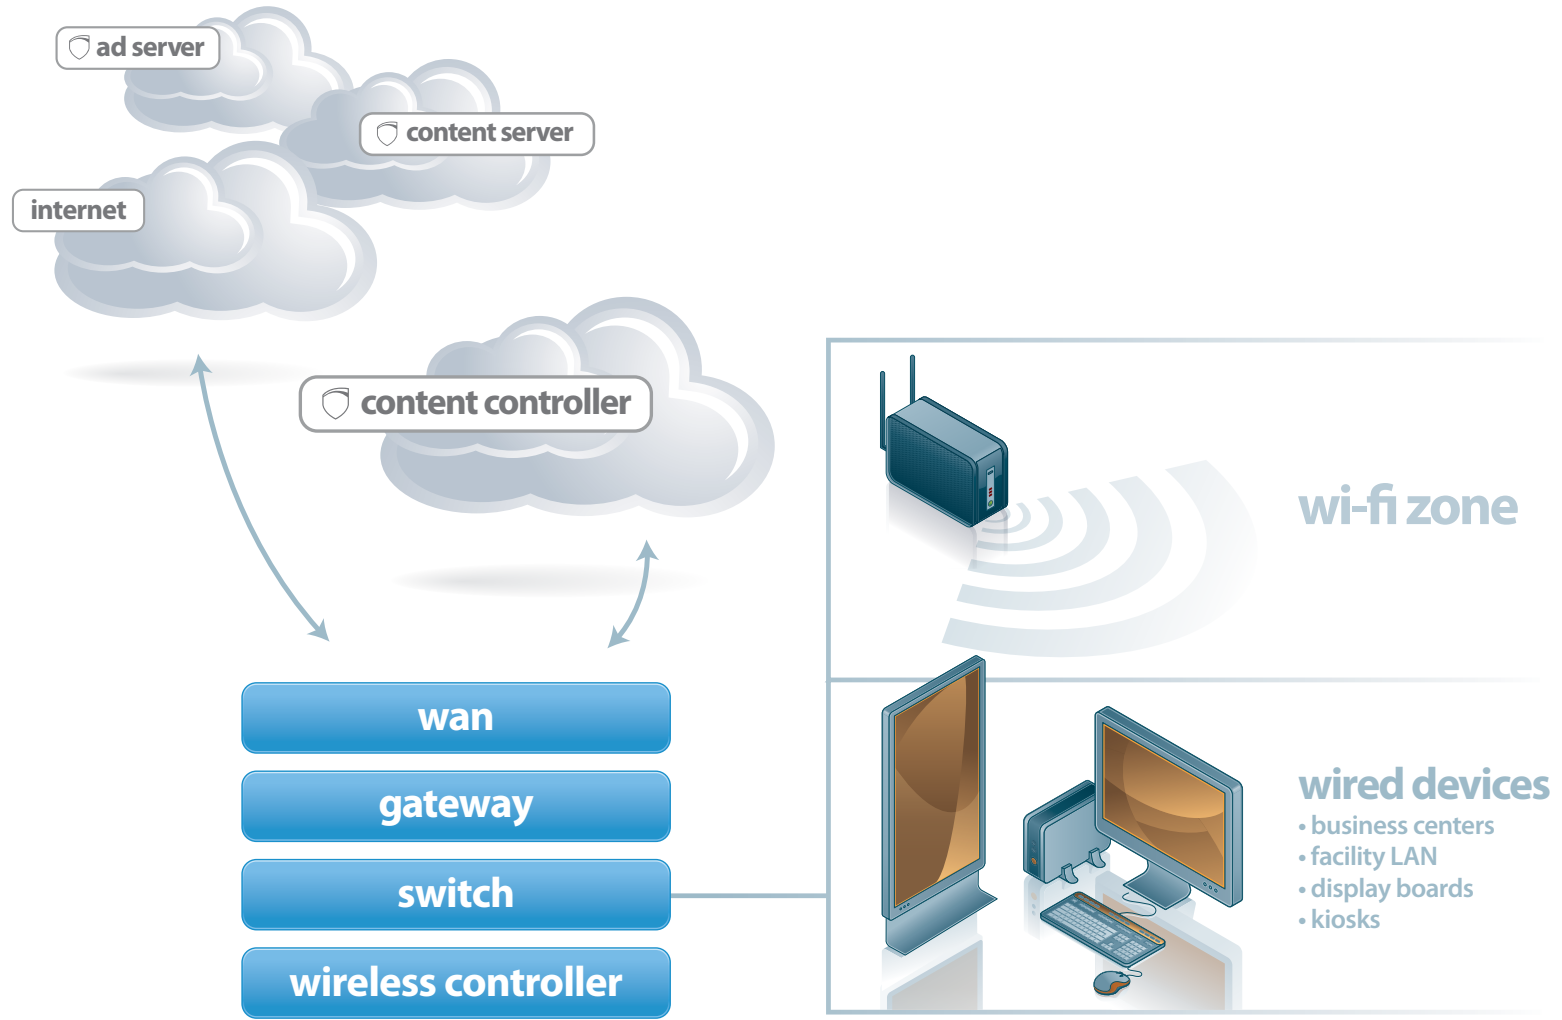

ux-1 light network topology

ux-1 cloud network topology

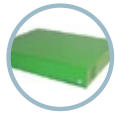

equivalent equipment

traffic shaper

(To control the network traffic in order to optimize and guarantee performance, improve latency, and increase usable bandwidth)

forced browser redirect engine

(To optimize customer acquisition, provisioning, security and revenue generation faced by Public Access Service Operators, System Integrators and venue owners)

utm/dpi security

(To prevent spam, virus, hackers, worms from entering your network. Also for spam and security problems for the entire network)

routing aggregation

(For organizing network layer IP addresses in a hierarchical way so that addresses are "topologically significant")

web cache/history reporting

(To reduce latency and network traffic)

oss/ems server

 **ux-1 gateway**

rapid deploy topology
